

Aryze Modern Sales and Onboarding Strategy

What we are doing, why it works, and how the model should be measured.

Executive summary

Aryze is moving from a traditional deck-led sales process into a modern, seller-guided, digital-first sales and onboarding model. The purpose is to make the buying journey clearer, faster, more relevant, and closer to implementation from the first serious conversation.

Instead of relying on static sales decks and broad discovery calls, Aryze will use segment-specific digital one-pagers as guided sales tools. These one-pagers will be tailored to each customer type and used by a seller or agent to explain the relevant product, show value, qualify fit, and move the customer toward the right next step.

This is not a fully self-serve sales model. Aryze sells financial infrastructure, so human trust, legal clarity, KYB, compliance, technical review, and onboarding still matter. The digital one-pager does not replace the seller. It makes the seller more effective.

The purpose is not to make sales self-serve.

The purpose is to make sales better.

The market has changed.

Buyers want digital clarity, but not to be left alone.

Modern B2B buying is increasingly digital, self-directed, and research-led. Buyers want access to information before they speak to sales. They also still need human support when the decision is complex, high-trust, or cross-functional. This is the exact middle ground Aryze should target.

61%

B2B buyers prefer an overall rep-free buying experience.

1.8x

More likely to complete a high-quality deal when supplier digital tools are used with a sales rep.

86%

B2B purchases stall during the buying process.

5-11

Average enterprise buying groups include 5 to 11 stakeholders across about five functions.

Buyers want control

Gartner reports that most B2B buyers prefer more rep-free experiences for early research and general learning. This means buyers need better digital clarity before the sales process becomes heavy.

Buyers still need guidance

The same research shows that buyers prefer seller input when they need contextual help, such as understanding whether a solution fits their company.

Deals often stall

Forrester reports that 86% of B2B purchases stall during the buying process. A clearer path from interest to onboarding can reduce uncertainty and keep momentum.

Buying groups are complex

Enterprise purchases involve multiple stakeholders across several functions. A clear one-pager gives internal champions a better asset to share with the wider group.

From static decks to guided digital one-pagers.

The old model starts with a deck and often separates sales from onboarding. The customer hears the story first, sees the product later, and only then starts to understand KYB, legal, technical, and implementation requirements. That can slow momentum and create unnecessary uncertainty.

The new model brings clarity earlier. The seller uses a tailored digital one-pager to guide the conversation, show the relevant product path, create a value moment, and move into a product-specific demo. If the opportunity is real, KYB and technical or legal review begin earlier.

Traditional flow	Updated Aryze flow
Static deck, broad discovery, product explanation, demo later, KYB later, onboarding after commercial alignment.	Segment-specific one-pager, seller-guided value conversation, product demo, qualification, KYB where relevant, IT/legal review, onboarding handoff.

The strategic shift

A traditional deck says: Here is what Aryze does.

A seller-guided digital one-pager says: Here is what this could mean for your business, and here is how we move forward.

What the one-pager should do

- Explain the relevant product faster.
- Make the customer?s problem clear.
- Show value in a practical way.
- Qualify the opportunity earlier.
- Move the customer toward the right next step.
- Make onboarding feel like it has already started.

One company. Three product paths. Three different buying motions.

Aryze should not use one generic sales asset for every customer. The product suite has three distinct product paths: Pay by Bank, Stablecoin Factory, and Digital Cash. These products are connected by the same broader infrastructure vision, but they do not serve the same buyer or solve the same problem.

That means each product needs its own digital one-pager, value story, demo logic, qualification criteria, and next step. The purpose is not to make the sales process more complicated. The purpose is to make each customer see the path that actually fits their need.

Merchant payments

Pay by Bank

For UK merchants and payment-driven businesses that need a faster, lower-friction, and more controllable way to get paid.

Self-serve deployment

Stablecoin Factory

For builders and technical teams that want to launch a simple stablecoin faster through a self-serve deployment flow.

Institutional infrastructure

Digital Cash

For already-licensed institutions that want to issue and operate digital cash under their own licence, governance, and control.

Why segmentation matters

A generic deck would blur these differences. Segment-specific one-pagers make them clear. They help the seller keep the conversation focused and help the customer understand which Aryze product is actually relevant.

It gives the seller a better tool and the buyer a clearer path.

A sales deck is usually fixed. It forces every customer through the same story, even when the buyer, problem, urgency, risk, and implementation path are different. That is a poor fit for a multi-product infrastructure company.

The digital one-pager model is stronger because it gives the seller a structured but flexible tool. It can be used live in a meeting, shared as a pre-read, or used after the meeting to help the customer align internally.

1. Earlier clarity

Buyers can understand the relevant product path before the meeting becomes too heavy.

2. Better seller role

The seller guides fit, value, risk, implementation, and next steps instead of repeating generic information.

3. Less product confusion

Each customer sees the path that fits their segment rather than a broad company story.

4. More relevant demo

The demo follows the customer's actual problem and product path.

5. Earlier trust layer

For financial infrastructure, KYB, legal, and integration should not be left too late.

6. Better internal sharing

A clear one-pager gives internal champions a better asset to share with the wider buying group.

The strongest experience is not a pitch.

It is a guided path from understanding to implementation.

The recommended sales and onboarding flow.

The process should feel short, serious, and close to implementation. Each step should reduce uncertainty and move the customer closer to a clear decision.

1	Identify the customer segment The seller identifies whether the prospect belongs to the Pay by Bank, Stablecoin Factory, or Digital Cash path.	Segment
2	Use the relevant digital one-pager The seller explains the problem, shows the product, introduces value, and makes the next step clear.	Guide
3	Create the value moment The page includes an interactive tool such as a calculator, readiness check, use-case selector, or infrastructure map.	Value
4	Show the product demo The demo comes early and is specific to the customer's path. It makes the product real and easier to evaluate.	Prove
5	Qualify the opportunity The seller confirms problem, urgency, internal owner, implementation path, and product fit.	Fit
6	Start KYB where relevant When fit and intent are clear, KYB starts as part of the trust and readiness process.	Trust
7	Bring in IT, legal, and compliance The next working session reviews integration, legal questions, KYB status, responsibilities, blockers, and onboarding path.	Align
8	Move into onboarding Sales hands off with product path, stakeholders, KYB status, requirements, blockers, and owners already clear.	Implement

The same strategy, adapted to each product.

The high-level process is shared, but the execution should change by product. Each product has a different buying reason, stakeholder group, and level of complexity.

Product	Primary motion	Sales focus
Pay by Bank	Direct commercial motion	Payment performance, cost, settlement speed, chargebacks, reconciliation, and control.
Stablecoin Factory	Product-led and technical motion	Use case, deployment readiness, speed to launch, self-serve setup, and future infrastructure needs.
Digital Cash	Enterprise-led infrastructure motion	Licence position, governance, compliance, treasury, operating responsibilities, infrastructure, and stakeholder alignment.

Pay by Bank

The process should make commercial value visible quickly and keep the conversation close to payment performance.

Stablecoin Factory

The process should help the customer understand whether simple deployment is enough or if deeper infrastructure is needed.

Digital Cash

The process should create confidence around governance, control, legal clarity, and operational readiness.

How Aryze should prove the strategy internally.

The public data supports the direction, but Aryze should build its own evidence. The strategy should not rely only on opinion. It should be tested and improved with real funnel data.

Funnel quality

Conversion

Track one-pager usage, meeting-to-demo conversion, demo-to-KYB conversion, and product-specific conversion by segment.

Momentum

Speed

Track time from first call to KYB, time to technical/legal review, time to onboarding, and sales cycle length.

Buyer confidence

Clarity

Track drop-off points, customer feedback, meeting quality, and whether customers understand the product faster.

The real test

The most important internal question is not whether the page looks better than a deck. The question is whether it helps customers move with more clarity and whether it helps sellers qualify and progress the right opportunities faster.

Handoff check before onboarding

? Product path selected

Pay by Bank, Stablecoin Factory, or Digital Cash.

? Fit qualified

Use case, urgency, decision process, and stakeholders are clear.

? KYB started

Compliance is involved early without stopping momentum.

? IT and legal aligned

Integration, contract points, responsibilities, and blockers are clear before setup.

A sales process that feels like serious infrastruc

Aryze should move forward with a modern, seller-guided digital sales and onboarding process. The strategy is strong because it combines digital clarity with human guidance. It does not assume buyers want to do everything alone. It also does not force every buyer into a traditional sales deck.

The digital one-pager gives the customer clarity. The seller gives the customer confidence. The demo makes the product real. KYB and legal review build trust. The onboarding path turns interest into implementation.

Clear. Guided. Practical. Trustworthy.
Ready for implementation.

Source notes

This analysis draws on publicly available B2B buying research from Gartner, McKinsey, and Forrester, including Gartner research on rep-free buying preferences, hybrid digital and human buying journeys, supplier-provided digital tools, and enterprise buying groups; McKinsey B2B Pulse research on digital and self-service channels; and Forrester 2024 research on stalled B2B purchases and buyer dissatisfaction.

It also draws on Aryze internal product, ICP, value proposition, and business model documents. No performance uplift has been assumed for Aryze's specific one-pagers. That should be measured internally once the process is live.
